

Carbon Reduction Plan

Supplier name: Triton Construction Ltd

Publication date: 03.06.2026

Commitment to achieving net zero

Triton Construction Limited is committed to achieving net zero emissions by 2050.

Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: January 2023 to December 2023

Additional details relating to the baseline emissions calculations:

We are continuously improving data collection for scope 3, and spend-based method as outlined in the GHG technical guidance for calculating scope 3 emissions, to use as the baseline year.

Baseline year emissions:

Emissions	Total (tCO ₂ e)
Scope 1	7820
Scope 2	11800
Scope 3 (included sources)	23700
Total emissions	43320

Current emissions reporting

Reporting year: January 2025 to December 2025

Emissions	TOTAL (tCO ₂ e)
Scope 1	141
Scope 2	88.3
Scope 3 (included sources)	22300
Total emissions	22529.3

Emissions reduction targets

In order to continue our progress towards achieving Net Zero, we have adopted a series of carbon reduction targets across all emission scopes.

We project that total carbon emissions will decrease over the next five years to approximately 19,125 tCO₂e by 2030, representing a 15% reduction from our 2025 calculations. This reduction will be driven primarily through improvements in supply chain engagement, sustainable procurement, and operational efficiency.

Carbon reduction projects

Completed carbon reduction initiatives

The following environmental management measures and projects have been implemented since the 2023 baseline:

- Fleet efficiency improvements and optimisation of transport activities
- Energy efficiency measures, including building insulation and reduced electricity consumption
- Initial supply chain engagement to improve carbon data transparency and sustainable procurement practices

The carbon emission reduction achieved by these measures is currently estimated at approximately 0 tCO₂e, representing a 0% reduction against the 2023 baseline, as improvements to date have primarily focused on data quality, methodology development, and establishing a robust emissions baseline.

These measures will continue to be in effect when performing the contract and are expected to deliver measurable carbon reductions over time as data accuracy improves and initiatives are further embedded across operations and the supply chain.

Future carbon reduction initiatives

In the future we hope to implement further measures such as:

- Installation of LED lighting & solar panels at Head Office.
- Training for Triton employees on efficiencies
- Trialling latest electric commercial vehicles

Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹³ and uses the appropriate government emission conversion factors for greenhouse gas company reporting.¹⁴

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.¹⁵

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the supplier:

A handwritten signature in black ink, appearing to read "Paul Clarkson", written over a horizontal line.
